

Guosong Liu

Founder & CEO, Neurocentria, California, USA

Former professor at MIT and Tsinghua University

Neurocentria
The Future in Mind

Biographical sketch: Guosong Liu, PhD, is Founder and CEO of Neurocentria, Inc., and the inventor of magnesium-L-threonate (Magtein), a magnesium compound now used worldwide for brain health. He received his PhD from UCLA and completed postdoctoral training at Stanford, and subsequently led neuroscience laboratories at MIT and Tsinghua University. His research — published in journals including *Nature*, *Neuron*, and *Nature Communications* — established the magnesium ion as a central regulator of synapse density and plasticity, and pioneered the translation of brain-magnesium science from molecular mechanism to human clinical trials over more than two decades.
